

Tutorial

Run the loader

Enter your license key and click the "Sign in" button.

Click the "Inject" button.

If you use this cheat for the first time, your PC will restart.

Open loader again, press inject.

After "Downloading Data" message CMD will pop-up. Wait till it says "Waiting for the game".

Once you see the "Waiting for the game message", launch the game.

FAQ

AES instruction set is not supported

This error means the processor does not support AES instruction set, so it cannot be fixed.

Please enable Intel VT-X in the BIOS

To fix this error, enter the BIOS and search for a feature named either "Intel virtualization technology" or "Intel VT-X" and enable it.

Please enable AMD-V in BIOS

To fix this error, enter the BIOS and search for a feature named either "AMD-V" or "SVM mode" and enable it.

Please disable secure boot in the BIOS

To fix this error, enter the BIOS and disable secure boot feature.

Unsupported firmware

To fix this error, convert the disk containing the operating system to GPT format using the built-in Windows tool mbr2gpt or any disk management utility of choice.

Secure boot keys are incorrect and need to be enrolled

To fix this error, enter the BIOS and enable secure boot feature, save settings, and reboot the pc then enter the BIOS and disable secure boot feature.

VMX/SVM is not supported

To fix this error, browse to "Control panel" -> "Programs and Features" -> "Turn Windows features on or off", and make sure that "Virtual machine platform" and "Hyper-V" are disabled. If the error still persists open cmd as administrator and enter the following command without quotes "bcdedit /set hypervisorlaunchtype off" then press Enter and reboot the pc.

Incorrect hwid

Open cmd as administrator, enter these commands one by one

```
wmic diskdrive get Caption, SerialNumber
```

```
wmic baseboard get SerialNumber
```

if any of those commands failed with an error then something is wrong with your pc, try to reinstall Windows and check if the problem is gone.
